1 LEXI Overview

1.1 A subsection

The [Lunar Environment heliospheric X-ray Image \(LEXI\)](#) ([Kuntz et al., 2022](#)) is a soft X-ray 0.1 - 2 keV imager developed to provide wide field-of-view ($\sim 9.1^\circ \times 9.1^\circ$) images of the interaction between the solar wind and Earth's . The telescope will operate for roughly 6.5 days from the lunar surface on the Blue Ghost 1 lander from . The project is led by [Boston University \(BU\)](#) and is a collaboration with NASA Goddard, Johns Hopkins University, the University of Leicester, and the University of Miami. [LEXI](#) is part of NASA's Lunar Science and Technology Program. You can find more details [here](#)¹. [Most Significant Bit \(MSB\)](#) and [Least Significant Bit \(LSB\)](#) are the most and least significant bits, respectively. [Science Data \(SCI\)](#) and [Housekeeping Data \(HK\)](#) are science and housekeeping data, respectively. [High Voltage \(HV\)](#) is high voltage. [BU](#) is .
